

Streamlining IT Procurement

Ideation Phase – Completed Artifacts

Date	28 September 2026
Team ID	SWTID-2026-8000
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Primary Platform	ServiceNow

Scope: Empathy Map Canvas

1. Empathy Map Canvas

Empathize & Discover

Primary persona: Employee / Requester

The canvas is tailored to the supplied journey-map content, especially the requester's goals, interactions, positive/negative moments, and opportunities.

SAYS	"I need a standard laptop." "Help me request a standard laptop quickly." "Help me submit the correct request." "Help me know whether my request is approved." "Help me understand what happens next."
THINKS	The request should be simple and easy to find. The correct Standard Laptop item should be clear. After approval, the configuration task should be created without another manual handoff. I should be able to see the request/task status.
DOES	Opens ServiceNow Service Catalog → Hardware → Standard Laptop. Selects Standard Laptop and Order Now. Submits the request and waits for approval. After approval, the request/task can be inspected through Requested Item → Catalog Tasks.

FEELS	Positive: confidence when approval gives authorization and when task status/assignment is visible. Negative: uncertainty about where to start, waiting for approval, and uncertainty about what happens next.
PAINS	Manual steps can create uncertainty. Waiting for approval can delay fulfillment. Without automation, configuration tasks may be missed or delayed. Manual follow-up may otherwise be required.
GAINS	Quick, clear Standard Laptop request. Repeatable approval-driven fulfillment. Automatic creation and Hardware assignment of the Catalog Task. Clear status and ownership. Reduced waiting and manual intervention.

Key insight: The requester needs a clear, repeatable path from Standard Laptop selection through approval to visible fulfillment status; the main opportunity is to remove the manual configuration-task handoff.
